

# **BUNKER** **KIT**®

**Your modular secure room.**

Looking for a safe place to store your valuables?

Looking for a secure place to protect your staff or your family in case of an emergency?

Our Bunkerkit® is the perfect solution whether at the workplace or at home.

**BUNKERKIT®**

Your modular secure room.

# The concept

The Bunkerkit® is a safe room providing exclusive protection against theft and intrusion. Our new well-designed concept developed by engineers from MetalQuartz secures valuables and individuals alike.

Our concept is simple: the Bunkerkit® is made of vertical panels, ceiling elements and floor armoured steel which are assembled in a unique way into a standalone unit.

The installation of our Bunkerkit® is performed by our qualified partners and can be supervised by a certified organization. No need for welding on site or binding in existing walls.

The key innovation is the modularity of our Bunkerkit®. Our customers can install quickly and easily a safe room, inside or outside their facilities, with or without floor, to meet their particular needs.

# The product

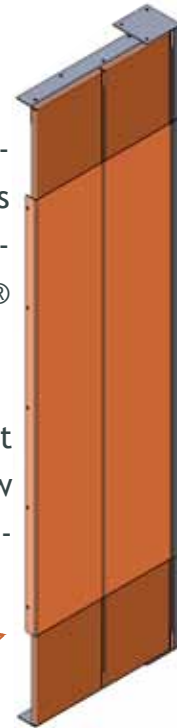

The panels of our Bunkerkit® consist of several layers of electro-galvanized steel plate treated against corrosion. Their manufacturing process guarantees a steady robustness. Relying on carefully designed material for their structure and size, our panels are quite light for easy handling and installation.

In addition, the floor load requirements are low reducing the need for reinforcing the soil to only specific extra weight needs. Manufacturing lead times are very short so is the installation on site.

The length and the width of the Bunkerkit® don't have limitation, but the width is set at minimum 1.40 m. It is simply a matter of adding panels until the Bunkerkit® dimensions meet your demand.

The 'standard' Bunkerkit® height is set at 2.30 m. Otherwise, the Bunkerkit is now height-adjustable thanks to its new system: the **Bunkerkit Teleskopik®**.

*Note: For more information on the steel material composition and structure of our BunkerKit®, please submit your request via our website [www.bunkerkit.com](http://www.bunkerkit.com)*

# Your key benefits

- ◆ **Effective protection features**
  - armour plating
  - burglar resistance
  - bullet-proof unit
  - sound insulation
- ◆ **Modular Kit**
  - for clients' specific locations and circumstances
  - lightness
  - ease of handling
  - quick installation
  - no limitations of the number of installations (assembly/disassembly)
  - no welding (fire permits not required on site)
- ◆ **Traceability and unique identification of each part**
- ◆ **Available in numerous finishes**
- ◆ **European standards certifications**

# Customization

Our Bunkerkit® offers a wide range of finishes and options including material choices, protection options, panels colors, interior trim finishing, all available to create a unique Bunkerkit® fully meeting your needs and priorities.

- ◆ **Panels availability:** wood panels / steel / Corten steel / ...
- ◆ **Performance according to your specifications:** acoustic standards / bulletproof / fire resistance / electromagnetic protection / ...
- ◆ **Dimensions:** width / length
- ◆ **Vault door:** left or right opening / inward or outward
- ◆ **Door locking systems:** electrical / mechanical / cylinder lock / automatic lock
- ◆ **Access control:** keyboard / fingerprint / ...
- ◆ **Floor:** with or without metal floor
- ◆ **Accessories:** vehicle barrier / secure mailboxes / room ventilation / ATM integration / doors / windows / counters / ...

A close-up photograph of a hand with light-colored, glossy nail polish holding a black fountain pen. The pen is positioned over a document with some faint, illegible text. The background is blurred, focusing attention on the hand and the pen.

# Certificates

## ◆ Burglar resistance

Our Bunkerkit® safe room complies with EN 1627-1630 level 4. It's burglar-resistant. These standards consist of a classification system into six categories (1 through 6 in increased burglar resistance) and describe test methods used to assess the resistance of these elements under static, dynamic as well as break-ins conditions.

## ◆ Ballistic protection

Our Bunkerkit® meets FB1 to FB7 and Kalashnikov levels in accordance with European standards EN 1522-1523. Our Bunkerkit® also received positive test reports from the Brussels Royal Military School's Laboratory of the Chair of Military and Ballistics.

## ◆ Fincertif

Our Bunkerkit® fully meets the Belgian Fincertif banking standard MB/E3 level. Standards and specifications FINCERTIF «Mechanical and Building Protection «describes the tests achieved by ANPI on panels and doors based on simulations of burglary attacks.

# Applications

- ◆ Secure frame for automated teller machines (inside or outside)
- ◆ Archiving room
- ◆ Data room
- ◆ Security Central with surveillance video, shields, ...
- ◆ Armory Equipment
- ◆ Storage areas for valuables, collectibles (jewelry, works, art, ...)
- ◆ Secure room (for documents, money, ...)
- ◆ Modular SAS with 2 or more doors
- ◆ Counter
- ◆ Secure garage
- ◆ Safe Room
- ◆ ...

Full integration of the Bunkerkit® in your home interior can be designed and our Bunkerkit® can even serve as a dressing room (please refer to page 11).
